Environmental Documents

INSTRUCTIONS: Environmental documentation prepared for Seattle District projects can be found in our Environmental Document Library.

Both recent documents and older archived documents are available.

To access a document, simply click on a link in the "Documents Available" column. The document files are in a PDF format, so you will need Adobe Acrobat Reader software on your computer to open them. Some of these files are quite large, so we suggest you download them onto your computer rather than trying to open them directly. To do this, right click on the link and then select "Save Target As."

If you would like more information on a project or to comment on a document, simply click on a name in the "Points of Contact" column to send us an email.

ABOUT THE DOCUMENTS: Environmental Assessments (EA) and Environmental Impact Statements (EIS) are prepared in accordance with the National Environmental Policy Act (NEPA). These documents provide general project information, a description of the alternatives considered, a description of existing conditions in the project area, and an evaluation of environmental benefits and impacts of the proposed project and the alternatives. Biological Assessments (BA) and Biological Evaluations (BE) are prepared for U.S. Fish and Wildlife Service and the National Marine Fisheries Service. They are technical documents which evaluate project impacts on animal and plant species protected under the Endangered Species Act (ESA). For more information on NEPA and ESA, please see our Environmental Compliance page.

Please note that not all document appendices, design drawings, and regulatory approvals are available online. These materials are

available for inspection at the Seattle District. You may also contact the Project Manager or Environmental Coordinator to arrange alternate means of access to these materials.
